

# Costing items contained in a manicurist's kit

Think about the 10 most essential items needed in a manicurist's kit.

Look on the Internet and cost these 10 items.

Next, put together a table showing the manicure items and their prices.

Then carry out the following calculations:

1. The total cost of all 10 items
2. The mean average cost for one item
3. No. of items above and below mean average
4. The range of prices for the 10 items

Make sure that your answer is rounded to 2 decimal places and that you show a method of checking your results.

Finally, prepare a chart to illustrate your results.

# Costing items contained in a tool kit

Think about the 10 most essential items needed in a Tool kit.

Look on the Internet and print off details of the tools, together with their cost.

Next, open up an Excel spreadsheet and put together a table showing each tool and its price.

Then carry out the following calculations:

1. The total cost of all 10 items
2. The mean average cost for one item
3. No. of items above and below mean average
4. The range

Make sure that your answer is rounded to 2 decimal places and that you show a method of checking your results.

Finally, prepare a chart to illustrate your results.
