## Planning a Journey

1. Choose a part of the United Kingdom you would like to visit for a few days with a friend.
2. Choose the dates and look at [www.travelodge.co.uk](http://www.travelodge.co.uk) Work out the cost of the accommodation.
3. Look at [www.theaa.com](http://www.theaa.com) (look for route planner) to work out how many miles it is from your home to your destination (you will need postcodes).
4. You have no car so you are going to hire one from [www.nationalcar.co.uk](http://www.nationalcar.co.uk) to take you there and bring you home.
5. Finally you have worked out that you should get 10 miles for every litre of petrol you need for your journey at a cost of 90p per litre.
6. Use the space below to work out the basic cost of your short break. You might decide it is better to look for a short break in Majorca.
7. **Remember** to print out information as you need it.

**Accommodation** £

**Distance in miles** @ 90p per litre £

**Hire of Car** £

**Total cost of your short break for 2** £

Have Fun!
