

Seven Times Table

For the seven times table you will need to think about weeks.

- How many days in a week?
- How many days in two weeks?
- What is another name for two weeks?
- Add together the days in one week and in two weeks,
then you know the days in three weeks:
- Double that and you know how many days in 6 weeks. (6 x 7)
- Two fortnights make four weeks.
How many days in four weeks?
- Add 7 to that and you know how many days in 5 weeks. (5 x 7)
- How often do we see a full moon?
- Double the days in four weeks and you know how many
days in eight weeks.
- Complete the table

X	1	2	3	4	5	6	7	8	9	10
7
