## To find \% content of water, divide water weight by food weight.

## Example:

GRAPES water weight 75 g food weight 92 g
Calculation 75 divided by $92=0.8152$
Round to 2 decimal places $=0.82$
Multiply by $100=\mathbf{8 2 \%}$

## Teaching notes

This resource was developed after I was pleased that one of the young men at my youth centre started talking mathematically. "A potato is $94 \%$ water," he said.
I checked and the percentage is 79 . So I thought this could be a good worksheet?
I left tomato off...
What is the difference between knowledge and wisdom?
Knowledge is knowing that a tomato is a fruit; wisdom is remembering to leave it out of the fruit salad!
